COLLEGE-MEENAKSHI SUNDARARAJAN ENGINEERING COLLEGE

TOPIC-BULID A PYTHON PROGRAM TO GENERATE RANDOM NUMBER FOR TEMPERATURE AND TURN ON THE BUZZER IF IT CROSSES A THRESHOLD.

PROGRAM:

```
import random
for x in range(1,10):
k=(random.uniform(0,100))
y=(random.uniform(0,100))
print("Temperature\t",(round(k,2)),"c")
print("Humidity\t",(round(y,2)),"g/m^3")
if(k>=30.0):
    print("Buzzer on\n")
else:
```

Python code Temperature detection

OUTPUT:

Temperature Humidity Buzzer off	18.16 c 42.11 g/m^3
Temperature Humidity Buzzer on	88.52 c 88.68 g/m^3
Temperature Humidity Buzzer on	79.22 c 5.48 g/m^3
Temperature Humidity Buzzer off	8.3 c 34.42 g/m^3
Temperature Humidity Buzzer on	79.86 c 1.03 g/m^3
Temperature Humidity Buzzer off	26.59 c 58.92 g/m^3
Temperature Humidity Buzzer off	7.19 c 13.99 g/m^3
Temperature Humidity Buzzer off	11.46 c 8.07 g/m^3
Temperature Humidity Buzzer on	56.41 c 63.78 g/m^3
